

Immediate Feedback on Project Direction

(This is some feedback to make sure your project is on the right track: you will be given detailed a mark and detailed feedback asap.)

Company name:

HSPL.

Technical aspects:

Little to no details about technical aspects are given: how will you code the app?

If you plan on actually putting an app together take a look at kivy. If not and you will just built the code underneath then python and matplotlib will be sufficient.

I'm curious how you will maintain a database with all the info?

Initial comments about write up:

Extremely poorly written in some section. Grammatical mistakes and at some point unreadable. Make sure you proof read your work.

Initial comments about strategy:

I like the idea, some more Market research with regards to how likely people are to use your product will be welcome?

Also, how would you get the necessary data?

General comments

Concentrate on the technical aspects but keep in mind some of the questions about strategy.

Write better.
