Immediate Feedback on Project Direction

(This is some feedback to make sure your project is on the right track: you will be given detailed a mark and detailed feedback asap.)

Company name:

Cymni Rhifau

Technical aspects:

You plan on building a basic database of questions using Python.

I think this if within your technical ability and also thought your pseudocode and flow diagram was clear.

You comment that having a non-based cloud based system is a strength. I am not sure I agree. I would rather use a website than a piece of software that I need to install, you need to justify this approach as a strength and not a weakness.

How will you build a GUI? Package the software? Compatibility with multiple operating systems etc...

Initial comments about write up:

Well written.

Initial comments about strategy:

See my earlier comment about cloud vs non cloud based software. Think about channels for distribution?

General comments

Well written, some important ideas need to be consider before making progress (see earlier comments).

Think about your strategy and make sure you get going on technical aspects.
